

Hello, I'm Manuel!

I am studying for a Master's degree in Electrical and Microsystems Engineering at OTH Regensburg in cooperation with Infineon. Before this Master's, I had already studied Microsystems Engineering at OTH.

The current political and social relevance of the technologies covered encouraged me to deepen my knowledge with the Master's degree. I particularly like the practical nature of the course and the good contact with lecturers and international students. The possibility of a dual study program with a strong partner like Infineon was another reason for me to choose this degree program. You get a special insight into the company and are well looked after from all sides.

If you have any questions about my studies, don't hesitate to contact me!
