Global & Multinational Software Engineering at BSH

How to deal with geographic distances, different time zones and cultural differences?

SPEAKER

Uwe Hauser
Head of Software Device

Michael Oberacher
Software Developer

Lilly Heindl
Strategic Innovation

ABSTRACT

Nowadays, software is increasingly being developed "globally" - in teams spread across different locations and countries. BSH, the world’s third largest manufacturer of household appliances, also operates internationally and develops software for the appliances in teams worldwide.

However, global software development also poses challenges: communication is affected by distance, different time zones and cultural differences affect collaboration.

In the speech you will gain insights into the management of international software development teams from a management perspective, as well as operational examples of a software developer. Furthermore you will learn how to manage infrastructure, intercultural aspects and you can directly connect with BSH employees.
