“Embracing diversity in Computer Science teaching”

REFERENT
Brian Tompsett
University of Hull

ABSTRACT
It is informally experienced by academic staff that different subjects attract certain stereotypes of student. Computer people are regarded by society as shy, introspective socially awkward, relating better to a machine than a person! The statistics of students with alternate needs do correlate with this informal experience. The talk will focus on enabling undergraduate computer science students to reach their full potential by understanding their needs. We will consider aspects of Autistic Spectrum, Mental Health (Low Self Esteem, Depression, Psychosis), Dyslexia, Dyspraxia, Visual Impairment, Physical Impairment, Epilepsy, Social Phobias and so on.
